

Aruna — IP Documentation

Project: Aruna: Intentional Calendar with AI Reflection

Creator: [Your Name]

Date Created: June 9, 2026

Location: Munich, Germany

IP Status: Prototype/MVP — Actively Securing

1. Core Innovation Summary

What is Aruna's Core IP?

Aruna is not a calendar with added AI. It's a fundamentally new operating system for intentional living that combines three innovations:

Innovation 1: The Intention-First Architecture

- Users set a daily intention BEFORE viewing the calendar (not after)
- The entire day's context shifts based on this single choice
- This inverts traditional calendar UX (task-focused → intention-focused)
- **Patent potential:** Method for contextualizing calendar events through pre-selected intention states

Innovation 2: AI Reflection as a Core Feature (not an add-on)

- Claude analyzes the gap between chosen intention and actual day
- Provides one actionable insight per day
- Uses this insight to adjust tomorrow's recommendations
- **Patent potential:** System for real-time intention-event alignment via LLM analysis

Innovation 3: Values-Goals Integration

- Calendar events are tagged against user-defined goals and personal values
- AI continuously asks: "Does this align with what matters to you?"
- Smart suggestions for "recovery time" or "value-aligned activities"

- **Patent potential:** Method for mapping calendar events to personal values framework

Why It Matters

Traditional calendars (Google Calendar, Outlook, Apple Calendar) optimize for **time efficiency**. Aruna optimizes for **intention alignment**. This is a new category.

2. Proof of Concept & Authorship Timeline

GitHub Commits (Timestamped Proof)

All code commits are timestamped proof of authorship and development timeline.

```
[DATE] Initial repo setup + README
[DATE] Figma wireframes exported to GitHub
[DATE] React component structure
[DATE] Replit DB integration
[DATE] Claude API integration
...
```

Design Ownership (Figma)

- All wireframes created by [Your Name]
- Figma file: [Link to private Figma file]
- Export date: June 2026
- Version history preserved in Figma

Technical Specification

- `ARCHITECTURE.md` — detailed technical spec (filed June 2026)
 - API endpoints defined and documented
 - Data model finalized
-

3. IP Categories & Strategies

A. Copyright (Automatic — Already Protected)

What's protected:

- All source code (React components, JavaScript, CSS)
- Design assets (Figma designs, icons, illustrations)
- Written documentation (README, specs, API docs)
- UI/UX flow and interaction design

How it's protected:

- Created June 2026 by [Your Name]
- Automatic copyright under German law (§2 UrhG)
- Copyrighted on creation, no registration needed
- Private GitHub repo = additional proof of non-publication

Strategy:

- Keep GitHub repo private until IP is formalized
- Add copyright notice to all files:

```
/**
 * Copyright © 2026 [Your Name]
 * All rights reserved.
 * Aruna Project – Intentional Calendar
 */
```

B. Trade Secrets (Strategic)

What's a trade secret:

- The exact Claude API prompts that generate reflections
- The intention-alignment algorithm
- User behavior data and analytics patterns
- The specific data model + database structure

How to protect:

- Keep in private repo (not public)
- Document internally but don't publish

- Add “Trade Secret” headers to sensitive code:

```
/**
 * TRADE SECRET: Intention Alignment Algorithm
 * Confidential – do not distribute
 * © 2026 [Your Name]
 */
```

C. Patents (Medium-term Strategy)

What could be patented:

1. Method for intention-driven calendar contextualization (Utility Patent)

- User sets intention → Calendar UI adapts → Events re-prioritized
- Claims: System, method, computer-readable medium
- Duration: 20 years from filing

2. AI-assisted intention-event alignment system (Utility Patent)

- Uses LLM to analyze intention-vs-actual gap
- Generates personalized reflection
- Predicts future intention-event misalignment
- Duration: 20 years from filing

3. Values-based calendar event recommendation system (Utility Patent)

- Maps user goals/values to calendar events
- Suggests “value time” recovery periods
- Dynamically adjusts event priority based on values framework

When to file:

- **Provisional Patent:** After working prototype (Month 2–3)
 - Cost: ~€300–500 via DPMA (Deutsches Patent- und Markenamt)
 - Timeline: 12 months to convert to full application
 - Advantage: Establishes priority date, “Patent Pending” status
- **Full Utility Patent:** After MVP with user data (Month 6+)

- Cost: €2,000–5,000 (Germany) + prosecution
- Timeline: 3–7 years to grant
- Advantage: 20-year protection in Germany + EU

Patent drafting:

- Work with Munich IP attorney (recommend: [TUM Patent Office fast-track](#))
- TUM has partnership agreements for startup IP

D. Trademarks (Brand Protection)

What to register:

- “Aruna” wordmark (EUIPO — European Union Intellectual Property Office)
- Aruna logo (if you create a distinctive one)
- “The intentional calendar” tagline (depends on distinctiveness)

Cost & Timeline:

- EUIPO: €850 for one class (software/apps = Nice Class 42)
- Timeline: 3–6 months to approval

Timing: File once you have product traction (Month 6+) and are confident in the brand.

4. Licensing Strategy

Current (MVP Phase)

- **License:** Proprietary — All rights reserved
- **Status:** No external use permitted yet
- **Collaborators:** Sign NDAs + IP assignment agreements

Future (Post-MVP)

Option A: Direct B2C SaaS

- Users pay subscription for Aruna app
- You retain all IP

- License: Proprietary SaaS Terms

Option B: API / Platform Licensing

- Other calendar apps license the “intention layer” from Aruna
- Example: Google Calendar integrates Aruna’s intention-setting + AI reflection
- Revenue: API licensing fees (per-user, per-call, or flat)
- License: Technology license agreement (non-exclusive or exclusive)

Option C: Patent Licensing

- License your patents to larger companies (Apple, Microsoft, Samsung for smart calendar products)
- Revenue: Upfront licensing fee + royalties
- Example deal: “Apple licenses Aruna’s intention-alignment patent for \$50K upfront + 2% of revenue”

Option D: Acquisition Play

- Build Aruna to Series A (\$3–5M raised)
 - Acquire company (Apple, Google, Microsoft, Notion) buys the whole company + IP
 - Price: \$20M–100M depending on traction
-

5. Documentation Requirements for IP Protection

Required Documents (Create & Date These)

1. Technical Disclosure (1 page)

- What is Aruna
- What problems it solves
- How the technology works (high-level)
- What’s new/innovative
- Date: June 9, 2026
- Signature: [Your Name]

- **Purpose:** Formal record of invention date

Template:

TECHNICAL DISCLOSURE

Title: Aruna – Intentional Calendar with AI Reflection

Date: June 9, 2026

Inventor: [Your Name]

Summary:

Aruna is a calendar application that inverts traditional calendar UX by having users set a daily intention first, then contextualizing all calendar events through that intention. An AI layer (Claude LLM) continuously analyzes the gap between chosen intention and actual day, providing daily reflections and suggestions.

Technical Innovation:

1. Intention-first architecture (user sets state before viewing calendar)
2. AI-driven intention-event alignment analysis
3. Values-based calendar event recommendation engine

Unique Technical Aspects:

- Real-time contextual reordering of calendar based on intention
- Personalized reflection generation via Claude API
- Goals/values tagging system for event relevance scoring

This is a novel application of calendar UX + LLM analysis and has not been previously published or disclosed.

Signature: _____

Date: June 9, 2026

2. Architecture Specification (technical document)

- Data model
- API endpoints
- Algorithm descriptions
- UI/UX flow
- Tech stack
- Date each section

3. Design System Documentation

- Visual components
- Color palette
- Typography
- Motion/animation rules
- Wireframes
- Date of design

4. Commit Log (GitHub)

- Every commit with date = proof of development timeline
- Use `git log --oneline` to generate a timestamped list

5. Internal Memos (optional but useful)

- Decision log: "Why we chose Claude over GPT-4"
 - Algorithm evolution: "Version 1 vs Version 2 of alignment check"
 - User research notes: "Feedback from early testers on intention selection"
-

6. Who Owns What (IP Ownership Matrix)

You Own (If working solo):

- All source code
- All design assets
- All documentation
- All algorithms
- Patent rights (if filed)
- Trademark (if registered)

You DON'T Own (If collaborating):

- Contributions from others (unless they sign IP assignment)
- Code from open-source libraries (respect their licenses)
- Design inspiration from Apple/others (fair use for concepts, not copying)

If TUM/Mantro/Partner Gets Involved:

- **Clarify immediately in writing:**
 - Does the partner get equity?
 - Does the partner get IP rights?
 - Can they license the tech?
 - What happens if you leave?
 - **Use these templates:**
 - Collaboration Agreement (you own IP, partner gets equity/revenue share)
 - IP Assignment (partner owns all IP, you get paid)
 - License Agreement (you own IP, partner gets exclusive license)
-

7. Steps to Formalize IP (Next 6 Months)

Month 1 (June 2026 — NOW)

- Create GitHub repo (private)
- Write Technical Disclosure (1 page)
- Document architecture + design system
- Take screenshots of Figma (proof of design)
- Sign internal memo (dated, to yourself) about the innovation

Month 2 (July 2026)

- Build MVP with working prototype
- Get early user feedback (3–5 testers)
- File Provisional Patent Application (DPMA)
 - Cost: €300
 - Timeline: 12 months to convert to full
 - Status: "Patent Pending"

Month 3 (August 2026)

- Decide: Keep proprietary OR open-source with license
- If proprietary: Draft Terms of Service
- Register trademark "Aruna" (EUIPO)
 - Cost: €850
 - Timeline: 3–6 months

Month 6+ (September–December 2026)

- Full Patent Application (if provisional was strong)
 - Cost: €2,000–5,000
 - Work with IP attorney
 - Partner discussions (mantro, TUM, investors)
 - All agreements signed before discussing detailed tech
 - Consider seed funding (Young Founders Fund, EXIST, BayStartUP)
 - These want to see clear IP ownership
-

8. Red Flags: What NOT to Do

Don't:

- Publish source code publicly before formalizing IP (unless open-source licensed)
- Share detailed algorithm/prompts with collaborators without NDAs
- Copy UI/design from Apple/Google/Notion directly (fair use has limits)
- File patent without consulting IP attorney (easy to mess up claims)
- Accept investment without clarifying who owns what IP

Do:

- Keep private repo private until ready
- Use NDAs for all early collaborators
- Document everything with dates

- Get legal review before signing any partnership
 - File provisional patent early (it's cheap + buys you time)
-

9. Resources for Next Steps

Munich-Based IP Support

- **TUM Patent Office** (Fast-track for TUM-affiliated innovators)
 - Contact: patents@tum.de
 - They manage TUM Venture Labs partnerships
 - Fast-track utility models: 2–8 weeks, €30–300
- **DPMA (Deutsches Patent- und Markenamt)**
 - German patent office
 - depatis.dpma.de — search existing patents
 - Online patent filing portal
 - Cost-effective vs. international filing
- **Bitkom** (German tech industry association)
 - Free legal resources for startups
 - IP webinars, templates

Recommended IP Attorneys (Munich)

- Bardehle Pagenberg (top-tier, expensive but excellent)
- Hoffmann Eitle (strong IP boutique)
- Flick Gocke Schaumburg (startup-friendly)

Mentorship

- **Jo Teichmann** — ask him specifically about IP strategy at Cada Health
 - **Benjamin Schüdzig** (mantro) — his company handles IP for portfolio companies
 - **TUM Venture Labs** — Dr. Philipp Gerbert can advise on timing
-

10. IP Ownership Declaration

I, [Your Name], created Aruna as an original work on June 9, 2026.

I own:

- All source code
- All design and UI assets
- All documentation
- All algorithms and methods
- Patent rights (filed or to be filed)
- Trademark rights (to be registered)

This work is:

- Confidential and proprietary
- Copyrighted under German law (§2 UrhG)
- Protected by trade secrets
- Subject to provisional patent filing (in progress)

Signed: _____

Date: June 9, 2026

Location: Munich, Germany

Last Updated: June 9, 2026

Status: MVP Development

Next Review: July 9, 2026 (after provisional patent filing)
